PatientID: HDR20

Okitobba 06, 2023

Color Code

HR: High-Level Resistance
LR: Low-Level Resistance
IR: Intermediate Resistance

S: Susceptible

Drug abbreviations in full

DRUG.CLASS	ABBREVIATION	DRUG.NAME
	ATV	Atazanavir
	DRV	Darunavir
	FPV	Fosamprenavir
PI	IDV	Indinavir
11	LPV	Lopinavir
	NFV	Nelfinavir
	SQV	Saquinavir
	TPV	Tipranavir
	ABC	Abacavir
	AZT	Azidothymidine
	DFT	Stavudine
NRTI	DDI	Didanosine
	FTC	Emtricitabine
	LMV	Lamivudine
	TDF	Tenofovir
	DOR	Doravirine
	EFV	Efavirenz
NNRTI	ETR	Etravirine
	NVP	Nevirapine
	RPV	Rilpivirine
	BIC	Bictegravir
	CAB	Cabotegravir
INSTI	DTG	Dolutegravir
	EVG	Elvitegravir
	RAL	Raltegravir

Comments

DRUG.CLASS	COMMENTS		
PI			
	M184V/I cause high-level in vitro resistance to 3TC and FTC and low/intermediate		
	resistance to ABC (3-fold reduced susceptibility). M184V/I are not contraindications to		
	continued treatment with 3TC or FTC because they increase susceptibility to AZT and		
NRTI	TDF and are associated with clinically significant reductions in HIV-1 replication.		
	T215Y/F are TAMs that causes intermediate/high-level resistance to AZT and potentially		
	low-level resistance to ABC and TDF.		
NNRTI	A98G is a non-polymorphic accessory mutation associated with low-level reduced		
	susceptibility to each of the NNRTIs.		
	G190A is a non-polymorphic mutation that causes high-level resistance to NVP and		
	intermediate resistance to EFV. It does not significantly reduce susceptibility to RPV,		
	ETR, or DOR.		
	V108I is a relatively non-polymorphic accessory mutation selected in vitro and/or in vivo		
	with each of the NNRTIs. It appears to contribute to reduced susceptibility to most		
	NNRTIs only in combination with other NNRTI-resistance mutations.
